1750 Euclid Ave, Cleveland, OH 44115, United States.

Summary

Innovative and results-driven Computer Science graduate with hands-on experience in machine learning, full-stack development, and data analytics. Skilled in building end-to-end AI solutions, scalable web applications, and automation tools that improve performance and user outcomes. Notable projects include deploying a quantum neural network classifier on 20K+ images, developing a compiler in Python to translate between machine and assembly code, and reducing patient visits by 40% using predictive health models. Proficient in Python, SQL, JavaScript, AWS, TensorFlow, and Flask, with a strong foundation in systems design, algorithms, and software architecture. Eager to apply deep technical skills to drive impact in data-driven and mission-focused organizations.

Education

Cleveland State University
[GPA: 3.7/ 4.0]

Master's (Hons) Computer Science

Afe Babalola University
[GPA: 3.59/ 5.0]

Bachelor's (Hons) Computer Science

Work Experience

Soaper LLC. Full Stack Intern
2025 - Present

Remote, Seattle

- Developing AI tools to reduce patient numbers in the hospital for consultation by 40% while increasing company profits
- Analyzing Diabetic Patients' data, using a machine learning model to analyze and predict diabetes rates in different age groups with high accuracy. Cut patients' wait times by 50% by deploying predictive ML models used by 500+ patients per month.

OlaReport Inc. Machine Learning Engineer
March 2024 - February 2025

Remote, UK

- Developed a Students' Performance Analysis System Using Supervised Machine Learning, Improved test accuracy for 300 students by 25% via a Python-based academic analytics tool.
-

Nacoss.(ABUAD Chapter) Software Director
September 2020 - March 2022

Ekiti, Nigeria

- Mentored undergraduate students on programming and software development.
- Also worked as an event/creative director, setting up and participating in Hackathons

Aptech Computer Education Internship(Junior Developer)
July - September 2021

Abuja, Nigeria

- As a Junior Developer, I built an inventory management system with Java that secretaries used to store data in a centralized system.
- I also helped teach new students alongside a tutor. Learning the basics of Java gave me an insight into Object-Oriented Programming.

Gifted and Talented Academy, Website Administrator & Volunteering IT Teacher
September 2019 - Present

Remote, Nigeria

- I co-manage the development and maintenance of the school's website, handling front-end and back-end functions.
- I update student results and ensure the platform runs smoothly. I also conduct teaching sessions with students, a role I was more involved in when I was there in person.
- Now, I focus more on managing the website and school operations while engaging with students through organized virtual classes.

Technical Projects

- **Quantum Dog Breed Classifier:** Built a hybrid Quantum Neural Network (QNN) trained on 20,000+ dog images for fine-grained breed classification. Achieved 90 %+ accuracy using quantum convolution layers and simulated quantum circuits via PennyLane. (Python, Qiskit, PennyLane, TensorFlow)
- **HealthBot: AI Medical Assistant:** Developed a medical chatbot for triage that suggests possible conditions based on user symptoms. Reduced unnecessary hospital visits by 30% during pilot testing with automated FAQ resolution. (Python, Flask, SQLite, Natural Language Processing)
- **FriendBook – Social Network App:** Created a Java-based social platform with full CRUD functionality and relational data modeling. Implemented secure user login, post creation, and direct messaging. Built a full backend schema using MySQL, allowing for scalable and relational data operations. (Java, MySQL, NetBeans)
- **Reddit Feed Delivery Web App:** Built a Flask app that pulls and formats top Reddit posts into a daily digest based on my interests. Reducing manual browsing time by 70% and improving content discoverability. (Python, Flask, Reddit API, HTML/CSS)
- **Python-Based Compiler:** Designed and implemented a custom compiler in Python that translates between machine language and assembly code. Enabled bidirectional translation: machine to assembly and assembly to machine, simulating core aspects of a real compiler. (Python, Assembly Language, File I/O)

Skills

Certifications

- | | |
|---|---|
| • Languages: Python, Java, JavaScript, C, C++ | • Python Programming - NIIT OpenLabs |
| • Frameworks: Django, Flask, Spring, Pygame, TensorFlow, PyTorch, Ruby | • Cyber Security - NIIT OpenLabs |
| • Tools: Git, Docker, AWS, NetBeans, VS Code | • CPN - Computer Professionals of Nigeria |
| • Databases: MySQL, Oracle, SQL Server | |
| • Other: Quantum ML, Data Visualization (Seaborn, Matplotlib) | |

Research

- **Analysis of Student Performances using Supervised Machine Learning Techniques.** (Implementation: Python, Random Forest, KNN, Decision Tree, Numpy, Matplotlib, etc.)

- Comparing Classical Neural Networks and Quantum Convolutional Neural Networks: Fine-Grained Dog Breed Classification (CNN, TensorFlow, Qiskit, PennyLane)

Relevant Course Work

- Comparative Programming Languages
- Database Management Systems
- Quantum Machine Learning
- Architecture and Operating Systems
- Analysis of Algorithms
- Big Data and Parallel Database Systems

Hobbies & Interest

Problem-solving (Debugging & Optimization), Formal Logic, Chess (strategic thinking), Open Source Collaboration, Tech-Driven Climate Action & AI Ethics
